I'm writing to say that I definitely support XM satellite radio. I travel a lot for work and find XM's variety to be very refreshing. I can hear more than just the same ten songs that the other radio stations play all day long with no annoying commercial interruptions every two or three songs. Also, I can stay current with news and sports. Traffic and weather is not currently offered in my area but I certainly wish that it was. I think it is a wonderful service. XM satellite radio is a service that I choose to pay for. Therefore, I really don't see how the National Association of Broadcasters has any say in what is broadcast by XM satellite radio, a service paid for by its subscribers. I am against the NAB's petition 04-160 and hope that the FCC opposes it as well.  
Sincerely,

Kellie Cable
